Standard Inspection Program for Organic Livestock Production
according to the European Regulation (EC) 834/07, the US National Organic Program (NOP), and CERES standard interpretation

For the crop production part of your farm (including grassland, hayfields and other production of feedingstuffs), please see the Standard Control Program for Crop Production

As a minimum, the inspection of organic husbandry will cover the following aspects:

<table>
<thead>
<tr>
<th></th>
<th>Review</th>
<th>of the organic management plan and its implementation.</th>
</tr>
</thead>
</table>
| 2 | **Physical Inspection** | Visit to all stables, pastures, outdoor exercise areas for animals, addressing:  
- Origin of livestock  
- Animal health and welfare  
- Adequate space, freedom of movement, bedding, ventilation, shade, shelter, etc. for the animals  
- Possibility to exercise comfort and social behaviour  
- Feeding and water availability and quality  
- Sanitation  
- Veterinary medicine  
- Identification of animals  
- Manure and urine storage |
|   | | Visit to storage rooms, on farm processing units, and other farm buildings, addressing:  
- Origin of feedingstuffs, conformity of additives  
- Labelling, traceability  
- Post harvest separation from non-certified products  
- Postharvest sources of pollution. |
| 3 | **Records** | Maps or drawings of all plots, including farm buildings showing details of animal housing  
- Invoices for purchase of animals, feedingstuffs, veterinary medicine and other relevant inputs  
- Stable book, origin of livestock  
- Records on daily production  
- Storage book and/or processing and/or packing protocol (if relevant)  
- Book keeping on all sales of husbandry products. |
|   | **See also** |  
- Brief information on organic animal husbandry  
- Management plan animal husbandry |

Please be aware, that these are the minimum requirements. In many cases, additional issues will have to be included in the inspection schedule!
